

# Audiodesksysteme Vinyl Cleaner Pro

HIGHLY COMMENDED  
ACCESSORIES

To create the Vinyl Cleaner Pro, the fully automated vertical ultrasonic record cleaning machine designed by Reiner Gläss, Audiodesksysteme took its popular Vinyl Cleaner and beefed up the drive mechanism, improved the pump, and switched to quieter fans. This makes the Vinyl Cleaner Pro one of the quietest record cleaning machines around and a lot more robust than its already solid predecessor. The top plate has been redesigned with a wider aperture at the left-hand side that allows for easier loading and removal of the LP at the end of the five-minute cycle. This means there is less chance of catching the LP on the microfibre barrels and having to remove water smears after cleaning. The black wiper blades have a coating that extends their life to between 500–700 LPs before a wiper blade change is required. There is also now a special outrigger for 7" singles. This can

be retrofitted to Vinyl Cleaner Pros built in 2018 or later.

In our test, Alan Sircom felt that “The cleaner is extremely good at cleaning extraordinary amounts of deep-groove crud out of what seem like clean records, and this is audible in the reduction in both the distant frying pan sizzling background sound, and even on LPs with low background noise... they get even quieter.”

Making both cleaning records and emptying and cleaning the machine as easy and as automated as possible, and using just 20ml it's economic too. Alan Sircom concluded that “Where queuing up a record is a joy when you get it right, cleaning them can become a chore. By taking the drudgery out of the record cleaning process, all you get is joy.”
